Browsers: the latest browsers supported by the operation systems are supported.

Windows: Internet Explorer, Mozilla Firefox, Google Chrome
Mac OSX: Mozilla Firefox (**ECC; RSA**), Safari, Google Chrome (**RSA**)
Linux: Mozilla Firefox, Google Chrome

DigiDoc3 crypto client changes

Added ECC Certificates Encryption / Decryption Functionality

DigiDoc3 client changes

The DigiDoc3 Client Diagnostic displays the information in Firefox PKCS11 loader (authentication module)

Minidriver Changes

IF user enters alphabets to PIN-dialogue window, then codes like this are not sent to chip anymore.
Support for domain logging with ECC certificates added to Windows Minidriver

Mozilla Firefox Authentication Module

Mozilla Firefox Authentication Support since version 58

Library fixes and changes

The new API support for the SiVa service added to the Libdigidocpp library
Libdigidocpp shows the improved validity of Lithuanian signatures

Additional improvements and changes

The "Crash report" transmission functionality was removed from the eID software components

ID-software ver. 17.11.0.1762 (released 20.11.2017 installer.id.ee)

Supported operating systems:

Windows 7 SP1 32bit and 64bit,
Windows 8.1 32bit and 64bit,
Windows 10 32bit and 64bit,
Mac OS X 10.11, 10.12, 10.13 (only Intel)
Ubuntu 16.04 (LTS) 32bit and 64bit, 17.04 32bit and 64bit, 17.10 32bit ja 64bit
Windows Server 2008 R2
Windows Server 2012
Windows Server 2016

Added the module compatible with Firefox 47

ID-software ver. 3.12.3 (released 03.05.2016 installer.id.ee)

Supported operating systems:

Windows 7 SP1 32bit and 64bit,
Windows 8.1 32bit and 64bit,
Windows 10 32bit and 64bit,
Mac OS X 10.9, 10.10, 10.11 (only Intel)
Ubuntu 14.04 (LTS) 32bit and 64bit, 15.10 32bit and 64bit, 16.04 (LTS) 32bit and 64bit
(19.05.2016)
Windows Server 2008 R2
Windows Server 2012

[Source Code](#)

DigiDoc3 Client changes:

Added the support of the renewed standard of trusted certificates list (TSL) via the Libdigidocpp library.
Enhanced the support of opening containers that are not compllient with the Estonian standard.
Enhanced configuration of access tokens.
Added the support of of the renewed trusted certificates list standard to the Libdigidocpp library.
Added the support of the websign method to the .net wrapper in the ibdigidocpp library.

Windows installer related changes
Changed some texts in the Windows installer.

ID-software ver. 3.12.2 (released 15.03.2016 installer.id.ee)

Supported operating systems:

Windows 7 SP1 32bit and 64bit,
Windows 8.1 32bit and 64bit,
Windows 10 32bit and 64bit,
Mac OS X 10.9, 10.10, 10.11 (only Intel)
Ubuntu 14.04 (LTS) 32bit and 64bit, Ubuntu 15.10 32bit and 64bit,
Windows Server 2008 R2
Windows Server 2012

Source Code

Browsers: the latest browsers supported by the operation systems are supported.

Windows: Internet Explorer, Mozilla Firefox, Google Chrome
Mac OSX: Mozilla Firefox, Safari, Google Chrome
Linux: Mozilla Firefox, Google Chrome

ID-card Utility program related changes

Enhanced the update module of the ID card application and certificates, added the functionality of recognition of different application versions.
Fixed the bug that did not allow to change a PIN code using the PUK code, if the PIN2 code was 000000 or the PIN1 code was 00000.
Fixed the bug that displayed the wrong error message when the user of a Gemalto's pinpad smartcard reader was choosing a too short number combination while changing their PUK code.
Fixed the bug that displayed the wrong information upon changing the ID card, if multiple smartcard readers are used.

Windows installer related changes

Fixed the bug of a missing "Sign digitally" menu option, when the user right-clicked on the document they wanted to sign in Windows operating systems.
Enhanced the reliability of the minidriver's component when using the repair functionality of the installer.
Fixed the displayed text in the English version of the installer.

ID-software ver. 3.12.1 (released 25.02.2016 installer.id.ee)

Supported operating systems:

Windows 7 SP1 32bit and 64bit,
Windows 8.1 32bit and 64bit,
Windows 10 32bit and 64bit,
Mac OS X 10.9, 10.10, 10.11 (only Intel)
Ubuntu 14.04 (LTS) 32bit and 64bit, Ubuntu 15.10 32bit and 64bit,
Windows Server 2008 R2
Windows Server 2012

Source Code

Browsers: the latest browsers supported by the operation systems are supported.

Windows: Internet Explorer, Mozilla Firefox, Google Chrome
Mac OSX: Mozilla Firefox, Safari, Google Chrome
Linux: Mozilla Firefox, Google Chrome

ID-card Utility program related changes.

Added the support of multiple smarcard readers.
Added the functionality of updating certificates and the ID card application.
Removed the *smartcardpp* component.
Fixed the bug that caused the ID card utility to display the message about the Digi-ID being used (with ID cards issued since 25 January 2016).

Windows installer related changes

32-bit DigiDoc3 Client and ID card utility are installed on 64-bit operating system
Fixed the licence conditions text of the installers

ID-software ver. 3.12 (released 01.02.2016 <https://installer.id.ee>)

Supported operating systems:

Windows 7 SP1 32bit and 64bit,
Windows 8.1 32bit and 64bit,
Windows 10 32bit and 64bit,
Mac OS X 10.9, 10.10, 10.11 (only Intel)
Ubuntu 14.04 (LTS) 32bit and 64bit, Ubuntu 15.10 32bit and 64bit,
Windows Server 2008 R2
Windows Server 2012

[Source Code](#)

Browsers: the latest browsers supported by the operation systems are supported.

Windows: Internet Explorer, Mozilla Firefox, Google Chrome

Mac OSX: Mozilla Firefox, Safari, Google Chrome

Linux: Mozilla Firefox, Google Chrome

DigiDoc3 Client changes:

Removed the support of creation of digital signatures in the DDOC format. It is also not possible to add or remove to/from the document signatures in the DDOC format.
Upon opening files signed in the DDOC format, the notification regarding the old Digidoc container format is displayed.

Added the support of the ESTEID-SK 2015 certificate.

Added the signing support with the Latvian, Lithuanian and Finnish ID cards in Mac OS X and Ubuntu operating systems.

Enhanced the signing support with the Latvian, Lithuanian and Finnish ID cards in Windows. To switch on signing with the respective state's ID card in DigiDoc3 Client, select 'Settings > General > "I want to digitally sign with the Lithuanian, Latvian or Finnish ID card"

Added the central configuration management that allows to update user software configuration settings from the Information System Authority's (RIA) server.

Added the functionality that checks the version and the configuration of the ID software as well as updates the configuration file (The "Check the update" button is available under the "Info" menu).

Removed the functionality of the usage blocker.

Updated the certificate trust list version of the European Commission to version 131.

Updated the list which certificate was used to enable the trust lists. As the trusted list signer, the certificates with the Common Name (CN) value "(SIGN) AGNIESZKA BAJNO", "EC_CNECT", "EC_DIGIT" and "Philippe Jean Renaud Schneider" are trusted

In case of the expired certificate trust list users are not requested if they want to continue to use the list. The list is automatically deleted and the notification about the expiration of the list is displayed.

Added the DigiDoc3 Crypto functionality that allows to check the trustworthiness of the certificate of the recipient.

Changed the intro text about digital signing.

ID-card Utility related changes

Added the central configuration management that allows to update user software configuration settings.

Changed the behaviour of the "Remove unnecessary certificates" button. Selecting "Settings> Remove unnecessary certificates" while the ID card is in the smartcard reader, removes certificates that are not related to this ID card.(Windows)

Removed the support of updating certificates of the older generation ID cards (v1.0).

Windows installer related changes

Enhanced the ID software installer - when installing the software, you can choose which components to install.

64-bit versions of DigiDoc3 Client and ID-card utility are now supported in case of 64-bit Windows operating systems.

In Windows operating system the ID software is installed in the C:\Program Files (x86)\Open-EID catalogue.
